P - SERIES

P - SERIES

OPTIMISED FOR URBAN AND REGIONAL TRANSPORT

With the P-series trucks you get a low weight cab with great visibility and driveability that is well balanced to suit your specific needs. The P-series is our most versatile cab range, ideal for urban and regional operations and well-proven for construction and other demanding conditions.

The P-series has excellent visibility and driveability, improving both safety and the feeling of control. The P-cab offers easy cab access, a quiet working environment and improved space and storage.

 <h3>DRIVER AREA</h3> <p>Urban Driving involves many starts and stops, repeated climbing in and out of the cab and the constant need to keep track of other vehicles and pedestrians around the truck while driving.</p>	 <h3>EXTRA SPACE</h3> <p>Working long hours like your drivers do, they might need to bring additional equipment, both personal and work-related. Either way, our cabs are equipped with smart storage facilities enabling them to stock up without the cab feeling cramped.</p>	 <h3>EXTERIOR DESIGN</h3> <p>Front, roof, side, underbody – all areas have been analysed, redesigned and optimised to achieve the lowest possible air drag. The shape of the cab and its corners, all gaps and angles have been narrowed and streamlined to achieve more efficient air flow and dynamic flow of lines. The lighting is one of the most prominent features of your truck, enhancing both its appearance and safety levels. As part of the basic configuration, position lights and extra lights are now integrated into the cab, without having a negative impact on aerodynamics.</p>
--	---	---

“WE ARE DEVELOPING SOLUTIONS TO ENSURE THAT OPERATORS IN THE WORLD’S MAJOR CITIES ARE ABLE TO COPE WITH THE CHALLENGES THAT FACE THEM.”

 <h3>P-SHORT</h3> <p>The short cab with low roof maximises the load capacity. Cab height 2920 mm (without air deflectors) Bed No Powertrain 250-460 HP</p>	 <h3>P-DAY</h3> <p>The lower roof allows for transport of overhead loads. Cab height Low (2920 mm), Normal (3260 mm) (without air deflectors) Bed No Powertrain 250-460 HP</p>	 <h3>P-SLEEPER</h3> <p>A day cab with resting equipment. Cab height Low (2920 mm), Normal (3260 mm), Highline (3520 mm) (without air deflectors) Bed Yes, 1 Bed Powertrain 250-460 HP</p>

P-SERIES SPECIFICATIONS

Scania delivers a wide range of engines which are compatible with alternative fuels, so you can find your perfect operational power to get the job done. This includes the new Scania Super 13-litre engine which contributes to groundbreaking powertrain fuel savings of 8%.

[See More >](#)

MAXIMISED COMFORT

Scania P-series is a premium working cab with easy access, incredible storage options and world-class resting possibilities. With an optimised dashboard and on-board entertainment, life on the road just got more comfortable. Our cabs and cab suspension have been designed to reduce vibrations to maximise the comfort. The driver seat and steering wheel can be adjusted to find your perfect driving position.

VISIBILITY

The Scania P-series is renowned for being handy in many different applications and operations. Entrance to the cab is low, with convenient handles that make it easy to climb in and out. The driver sits high and has a good view of the traffic ahead. It's the best driver station in its class.

FIND YOUR POWER

Scania delivers a wide range of engines which are compatible with alternative fuels, so you can find your perfect operational power to get the job done. This includes the new Scania Super 13-litre engine which contributes to groundbreaking powertrain fuel savings of 8%.

GEARBOX ALTERNATIVES

Our comprehensive gearbox range can be adapted to all types of powertrain to deliver the full range of power across your Scania powertrain. Offering improved driveability, Scania's gearboxes can be fitted with the high-performance Scania Retarder.

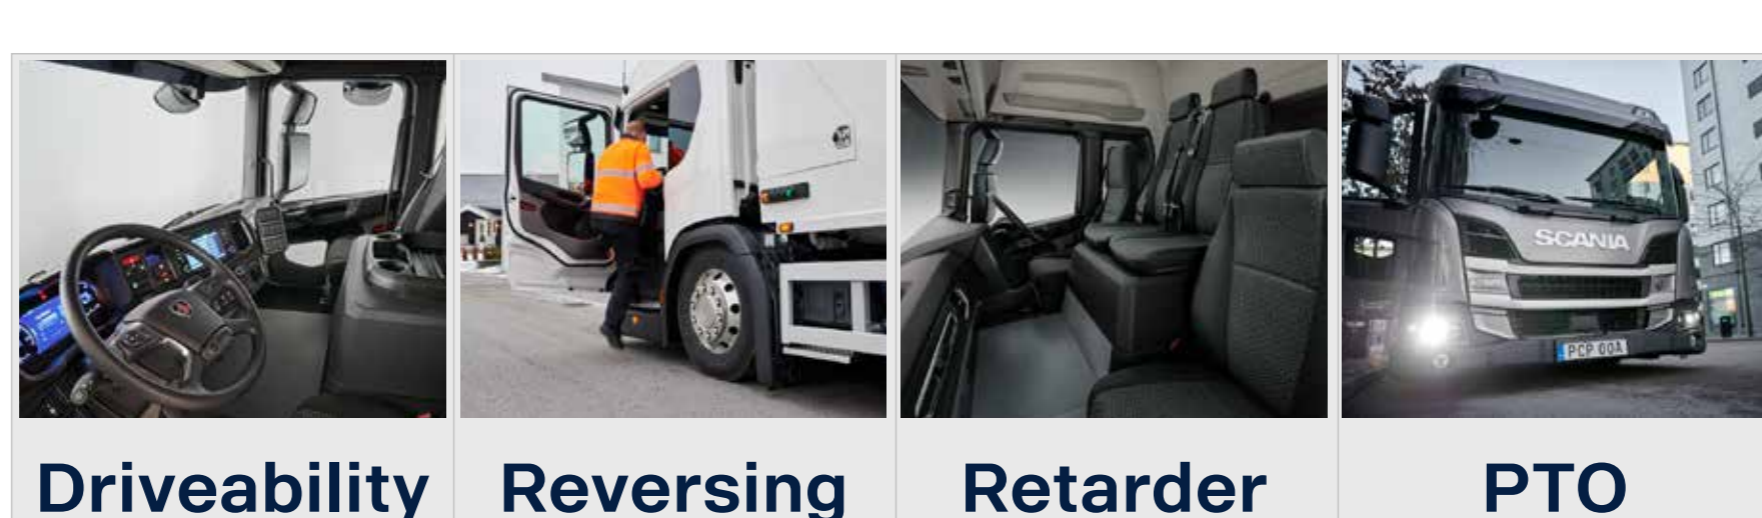

The Scania Opticruise Mechanical Gearbox G25 and G33 set the highest industry standard for gearbox performance. Together with improved overall robustness, the Scania Opticruise remains the leading choice for sustainable, fuel-efficient transport operations.

RANGE-CHANGE GEARBOXES RANGE-SPLITTER GEARBOXES OPTICRUISE GEARBOX

Scania's Opticruise gearbox platform, available in two performance steps G25 and G33, delivers improved and speedy gearshifting in combination with excellent comfort and fuel savings of one percent.

The Opticruise's fully automated clutch control, which allows for precision manoeuvring and smoother gear performance, is complemented by a wider, more efficient 14-gear spread, and new technologies such as variable oil volume and oil spray function to improve gear lubrication and reduce internal losses.

The platform also introduces a new compact, geometric design, as well as low weight cast aluminium housing, resulting in significantly lower sound levels and a reduced component weight of up to 75 kilograms. Additionally, the Opticruise delivers increased uptime and fewer maintenance stops through an extended oil change interval. All this to ensure that your total operating economy is optimised.

Driveability

Better driveability is achieved with a wider gear ratio spread, which includes super crawler and overdrive, that match Scania's low rev engine philosophy.

Reversing

Instead of a reversing gear, a planetary gear is used for reversing. This solution enables having eight gears for going in reverse at speeds up to 30 km/h. (This is useful when, for instance, tipper trucks need to reverse for long distances.)

Retarder

The retarder on the G33 has also been updated and improved and can now deliver 4700 Nm torque at a propeller shaft speed below 600 rpm.

PTO

PTO - With the Scania Opticruise gearbox, a new PTO programme with nine different performance steps is introduced. Higher torque and gear ratio improves the overall performance of bodywork equipment. Lower noise levels and reduced fuel consumption is the result of higher gear ratio, which allows lower engine speeds.

BUSES AND COACHES

FOR EVERY MILE AND EACH JOURNEY

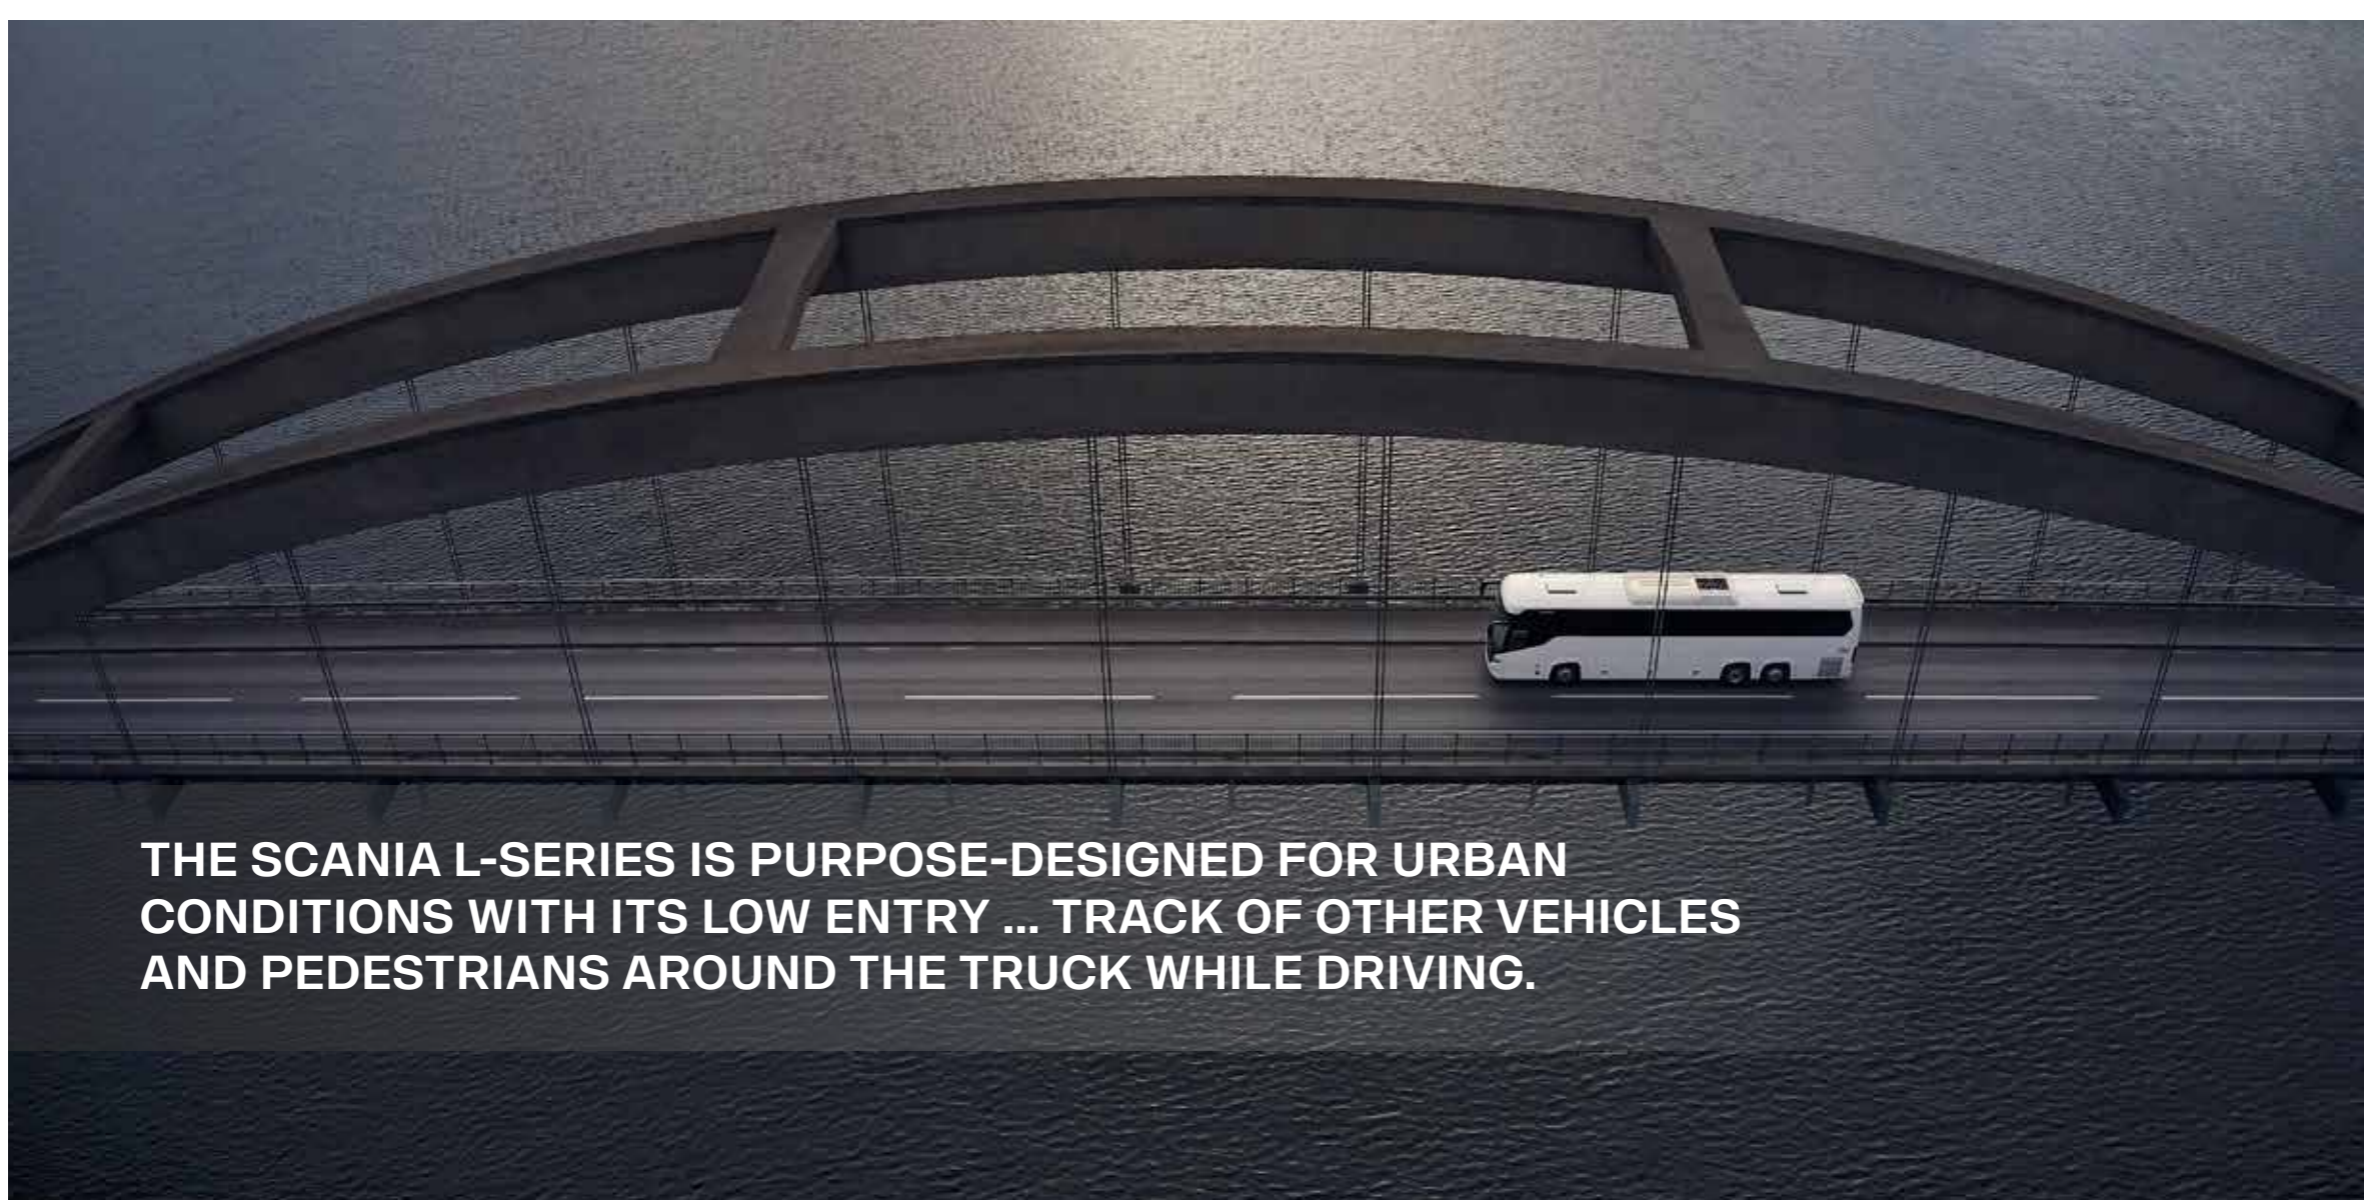

Scania aims to be a frontrunner in sustainable mobility. And we know that caring about the bigger picture requires putting a lot of effort into the details. Over more than a century, we have accumulated a deep understanding and a knowledge base that enables us to develop the buses, coaches, and services needed to make sustainable mobility happen – everywhere.

At Scania, we approach the challenge from all angles, providing a wide range of efficient quality vehicles and smart services that allow sustainability to go hand in hand with operating economy. That, we believe, is how we create real change.
